Susannah,

Here's a clarification to our earlier response:

Procedures for responding to ENRAF annulus alarms were in place as part of two separate tank farm operating procedures in October 2011. An additional Alarm Response Procedure (ARP) was not necessary because AY/AZ farm ENRAFs alarm to the Tank Monitor and Control System (TMACS) surveillance system which is monitored 24 hours a day and includes alarm response procedures. A second procedure also covered follow-up response to ENRAF alarms.

Hi Jerry,

Exactly as we talked about before- that from 12:15 on October 9, 2011 to present, no ARP for annulus ENRAF in alarm exists. You responded to us on the phone and via written email statement that I am wrong. (It's posted on our website) - that "there is and has been an Alarm Response Plan ARP for the ENRAF"

After you and John asked me on the phone if I was there when the alarm went off, I responded that I was not, but your shift manager was and he couldn't find an ARP. At that point I asked you to please provide us with the ARP to clear this up and to date we have not received anything. That is why we made the effort to email and call again yesterday.

Hi Jerry,

As promised, I am giving you a heads up on our next Hanford story. It will air tomorrow night at 10 and 11 pm. Like before, both stories will be the same. An online version will post sometime after 10 pm (maybe a little earlier) and they will probably run on Saturday during one of the newscasts.

This story is about the lack of an ARP for a DST annulus ENRAF in alarm. We are including the statement you provided to us on this topic in the story.

Thank you,
Susannah
